

#### Train Model & Predict the Price

\* Goals of visualizing the correlation between different factors/features with respect to the 'price'.

\* **Summary of Model Performance**  
**MAE of 77.99:** The model's predictions are, on average, within 78 units of the actual values.  
**MSE of 93049.87:** The overall errors in the model's predictions are relatively small.  
**R-squared of 0.979:** The model explains about 97.9% of the variance in the target variable, indicating a very good fit.
